General Comments:	

	Max	Actual	Comments
Part 1: Running smoothly on 4 systems	35	0	
a-centos5: Compilation (-1 for each warning)	5	0	
a-centos5: Running	5	0	
a-solaris8: Compilation (-1 for each warning)	5	0	
a-solaris8: Running	4	0	
a-freebsd6: Compilation (-1 for each warning)	4	0	
a-freebsd6: Running	4	0	
a-osx: Compilation (-1 for each warning)	4	0	
a-osx: Running	4	0	

Part 2: Code	35	0	
Remove unnecessary definitions from .c/.h files and put them into skey.h. (Can use separate .h file, but it needs to be documented.)	7	0	
All #ifdef's are feature-specific (not OS-specific).	7	0	
Define constants before use (don't use predefined system variables)	5	0	
Three levels of -d debugging option work	6	0	
Logging option works, and stderr is not caught in the log	4	0	
Help (-h) works	1	0	
Version (-v) works	1	0	
No warnings when compiled with gcc -Wall on systems that support gcc	4	0	

Part 3: Script, Makefile template, and README	30	0	
Test everything needed and modify code correctly and efficiently	10	0	
Use template to generate Makefile	5	0	
Good/efficient script style.	5	0	
Good comments	5	0	
README file named README.cse376, properly documenting changes	5	0	

Extra Credit: Finding Real Bugs	10	0	
Get skey to produce the same output on all four systems and a-irix.	6	0	
Compile and run on a-hpux11.	4	0	

General Demerits	0	0	
Followed CVS submission guidelines improperly	0	0	
Submission on time: deduct 1 point for every late hour (time rounded up in units of one hour)	0	0	

Total Grade (out of 100)	100	0	
Total Extra Credit	10	0
