

# Background

**Reading:**  
**CHAPTER 1: (Computers and Systems)**

# Typical Computer

- Is the device fast enough to run necessary programs?
- Is the device cost-effective?
- Will it be obsolete in 6 months?
- Will some applications run better on one device or another?
- Do you know the implications of different features and measures?
- Are you proficient enough in the terminology of the specifications to ask questions?

	iPhone 4	Droid X
<b>Network</b>	AT&T	Verizon
<b>Operating System</b>	iOS 4	Android 2.1 with Motoblur 2
<b>Screen Size</b>	3.5-inch IPS @ 960x640	4.3-inch TFT@480x854
<b>Processor</b>	Apple A4 (@ 1GHZ)	TI OMAP 3630 @ 1GHZ
<b>Memory</b>	512MB RAM	512MB RAM
<b>Storage</b>	16GB / 32GB internal	8GB (app storage)
<b>Data Speed</b>	EDGE (2.5 G) / HSPA 7.2 (Quad band)	1x RTT / EVDO Rev. A (3G)
<b>microSD Card</b>	Never	16GB included (up to 32GB)
<b>Rear Camera</b>	SMP 1.75 micro, flash	8MP with autofocus, dual flash
<b>Max. video recording resolution</b>	720p 30fps	720p (fps?)
<b>Front Camera</b>	Yes, VGA	None
<b>Second mic</b>	Yes, noise canceling	Yes, noise canceling
<b>Third mic</b>	None	Yes, video recording
<b>Adobe Flash</b>	Never	Coming with Froye
<b>Bluetooth</b>	2.1 + EDR	2.1 + EDR
<b>WiFi</b>	802.11b/g/n Wi-Fi (802.11n 2.4GHz only)	802.11 b/g
<b>MiFi-like hotspot</b>	None	Yes
<b>GPS</b>	aGPS	aGPS
<b>FM Radio</b>	No	Yes
<b>TV out</b>	Apple AV cables	via HDMI
<b>Size</b>	4.5 x 2.31 x 0.37 inches	(pending)
<b>Weight</b>	4.8 ounces	
<b>Battery</b>	1420mAh	1570mAh
<b>Price</b>	\$199/\$299 with 2-year contract on AT&T	\$199.99 with 2-year contract, rebate
<b>SIM</b>	MicroSIM	None

## Why Study Computer System Architecture?

- User
  - Understand system capabilities and limitations
  - Make informed decisions
  - Improve communications with information technology professionals
- Programmer
  - Create efficient application software for specific processing needs
- Systems Architect or Systems Analyst
  - Specify computer systems and architecture to meet application requirements
  - Make intelligent decisions about system strategy

What IS related job do you expect to have after graduation?

and Robert F. Kelly

1-3

## Why Study Computer System Architecture?

- System Administrator / Manager
  - Install, configure, maintain, and upgrade computer systems
  - Maximize system availability and efficiency
  - Optimize system performance
  - Ensure system security
- Web Services Designer
  - Optimize customer accessibility to Web services
  - Optimize web system configurations
  - Select appropriate data formats, page designs and scripting languages
  - Design efficient Web pages

and Robert F. Kelly

1-4

## Web Browser Application Use

Demonstrates a computer system that contains more than one computer

The diagram illustrates the interaction between a user and a web server. On the left, a 'User' (represented by a smiley face) provides a 'URL' to a 'Web Browser' (represented by a computer monitor and keyboard). The Web Browser sends a 'Page request message' to a 'Communication Channel' (represented by a cloud). The Communication Channel then sends a 'Page request message' to a 'Web Server' (represented by a server rack). The Web Server responds by sending an 'HTML file' back to the Communication Channel, which then sends the 'HTML file' back to the Web Browser.

## Input-Process-Output Model (IPO)

We start with a simple computational model, and then expand it during the semester

The diagram shows the Input-Process-Output Model (IPO). It consists of four main components: 'Input' (represented by a parallelogram), 'Process' (represented by a rectangle), 'Output' (represented by a parallelogram), and 'Storage' (represented by a cylinder). Arrows indicate the flow of data: from Input to Process, from Process to Output, and bidirectional arrows between Process and Storage.

- Input: keyboard, mouse, scanner
- Processing: CPU executes the computer program
- Output: monitor, printer, fax machine
- Storage: hard drive, optical media, diskettes, magnetic tape

1-6

## Simplified IT Computer System Layout

Example of a system embedded in a larger IT system

Copyright 2010 John Wiley & Sons, Inc. and Robert F. Kelly

1-7

## Computer System Components

- **Hardware**
  - Processes data by executing instructions
  - Provides input and output
  - Control input, output and storage components
- **Software**
  - Applications and system software
  - Instructions tell hardware exactly what tasks to perform and in what order
- **Data**
  - Fundamental representation of facts and observations
- **Communications**
  - Sharing data and processing among different systems

Copyright 2010 John Wiley & Sons, Inc. and Robert F. Kelly

1-8

## Hardware Component

- Input/Output devices
- Storage Devices
- CPU – Central Processing Unit
  - ALU: arithmetic/logic unit
  - CU: control unit
  - Interface unit
- Memory
  - Short-term storage for CPU calculations

Copyright 2010 John Wiley & Sons, Inc.  
and Robert F. Kelly

1-9

## Typical Personal Computer System

Copyright 2010 John Wiley & Sons, Inc.  
and Robert F. Kelly

1-10

## CPU: Central Processing Unit

- ALU: arithmetic/logic unit
  - Performs arithmetic and Boolean logical calculations
- CU: control unit
  - Controls processing of instructions
  - Controls movement of data within the CPU
- Interface unit
  - Moves instructions and data between the CPU and other hardware components
  - *Bus*: bundle of wires that carry signals and power between different components

Copyright 2010 John Wiley & Sons, Inc.  
and Robert F. Kelly

1-11

## Memory

- Also known as *primary storage*, *working storage*, working storage, and *RAM (random access memory)*
- Consists of bits, each of which hold a value of either 0 or 1 (8 bits = 1 byte)
- Holds both instructions and data of a computer program (*stored program concept*)

Usually implemented as a memory hierarchy

Volatile and non-volatile memory

Copyright 2010 John Wiley & Sons, Inc.  
and Robert F. Kelly

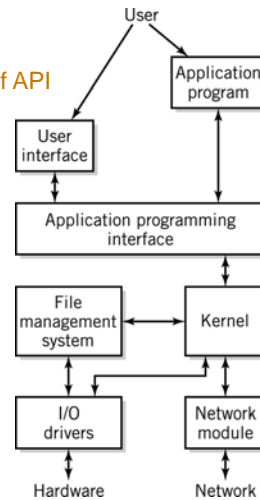

1-12

## Software Component

- Applications
- *Operating System*
  - API: application program interface
  - File management
  - I/O OS Interface:
  - Kernel command line or GUI
    - Memory management
    - Resource scheduling
    - Program communication
    - Security
  - Network Module

Issue of disclosure of API

Copyright 2010 John Wiley & Sons, Inc.  
and Robert F. Kelly

1-13

## Communications Component

- Hardware
  - Communication *channels*
    - Physical connections between computer systems
    - Examples: wire cable, phone lines, fiber optic cable, infrared light, radio waves What are the important characteristics of communications channels?
  - Interface hardware What are the important characteristics of communications channels?
    - Handles communication between the computer and the communication channel
    - Computer external interfaces (e.g., network interface)
- Software
  - Establish connections
  - Control flow of data
  - Directs data to the proper applications for use

Copyright 2010 John Wiley & Sons, Inc.  
and Robert F. Kelly

1-14

## Computer Systems

All computer systems, no matter how complex, consists of the following:

- At least one CPU Von Neumann architecture
- Memory to hold programs and data
- I/O devices
- Long-term storage

Copyright 2010 John Wiley & Sons, Inc.  
and Robert F. Kelly

1-15

## Computer Systems Examples

IBM System z10 EC Mainframe

HP Laptop Computer

Copyright 2010 John Wiley & Sons, Inc.  
and Robert F. Kelly

1-16

## Virtualization

- Virtual (American Heritage Dictionary)
  - Existing or result in essence or effect though not in actual fact, form or name
  - Created, simulated, or carried on by means of a computer or computer network
- Computer systems examples
  - Virtual memory *What do you think these mean?*
  - Virtual networks
  - Java Virtual Machine *What is the advantage of virtualization?*

Copyright 2010 John Wiley & Sons, Inc.  
and Robert F. Kelly

1-17

## Protocols

- Common ground rules of communication between computers, I/O devices, and many software programs *Importance of universal protocols (e.g., IP)*
- Examples
  - HTTP: between Web servers and Web browsers
  - TCP/IP: between computers on the Internet and local area networks
  - SATA: between storage devices and computers

Copyright 2010 John Wiley & Sons, Inc.  
and Robert F. Kelly

1-18

## Standards

- Created to ensure universal compatibility of data formats and protocols
- May be created by committee or may become a de facto standard through popular use
- Examples: **Industry standards vs. vendor standards**
  - Computer languages: Java, SQL, C, JavaScript
  - Display standards: Postscript, MPEG-2, JPEG, GIF
  - Character set standards: ASCII, Unicode, EBCDIC
  - Multimedia standards: MPEG-2, MPEG-4, DivX, MP3

Standards with exceptions/extensions

Copyright 2010 John Wiley & Sons, Inc.  
and Robert F. Kelly

1-19

## Computer Fabrication

- Moore's Law
- Increasing chip integration
- Reduction in variation in architectures
- Importance of regularity
- Chip fabrication
  - Investment cost
  - Product cost

Copyright 2010 John Wiley & Sons, Inc.  
and Robert F. Kelly

1-20

## Modern Computer Development

- 1937: Mark I is built (Aiken, Harvard University, IBM).
  - First electronic computer using relays.
- 1939: ABC is built
  - First fully electronic digital computer. Used vacuum tubes.
- 1943-46: ENIAC (Mauchly, Eckert, University of Pennsylvania).
  - First general purpose digital computer.
- 1945: Von Neumann architecture proposed.
  - Still the standard for present day computers.
- 1947: Creation of transistor
  - (Bardeen, Shockley, Brattain, Bell Labs).
- 1951-2: EDVAC and IAS

Copyright 2010 John Wiley & Sons, Inc.  
and Robert F. Kelly

1-23

## Early Computers

Babbage's Analytical Engine

ENIAC

Copyright 2010 John Wiley & Sons, Inc.  
and Robert F. Kelly

1-24

## System Software History

- Early computers had no operating systems and were single user systems
  - Programs were entered using switches for each bit or by plugging wires into a panel
- 1953-54: First operating system was built by General Motors Research Laboratories for their IBM 701 computer
- Other early systems
  - FORTRAN Monitor System (FMS)
  - IBSYS
  - Share Operating System (SOS)

Copyright 2010 John Wiley & Sons, Inc.  
and Robert F. Kelly

1-25

## Operating System Development

- 1963: Master Control Program (MCP) by Burroughs. Included many modern OS features.
- 1964: OS/360 by IBM. First general processing computer.
- 1962: MIT Project MAC created a time-sharing OS called CTSS. Shortly afterwards, MIT, Bell Labs, and GE developed Multics (Multiplexed Information and Computing Services).

Copyright 2010 John Wiley & Sons, Inc.  
and Robert F. Kelly

1-26

## UNIX

- After Bell Labs withdrew from the Multics project, Ken Thompson developed a personal operating system called UNIX using assembly language.
- Dennis Ritchie developed the programming language C which was used to rewrite much of UNIX in a high-level language.
- UNIX introduced
  - A hierarchical file system
  - The shell concept
  - Document production and formatting
  - Tools for networked and distributed processing

Copyright 2010 John Wiley & Sons, Inc.  
and Robert F. Kelly

1-27

## Graphical User Interfaces

- 1960s: Doug Englebart (Stanford Research Institute)
  - Invented windows and a mouse interface
- 1970s: Xerox PARC
  - Creates a practical windowing system for the Dynabook project
- 1980s: Steve Jobs (Apple)
  - Developed the Apple Lisa and Macintosh

Copyright 2010 John Wiley & Sons, Inc.  
and Robert F. Kelly

1-28

## IBM PC

- 1982: Stand-alone, single user computer
- PC-DOS, MS-DOS (disk operating system)
- Later versions of DOS added
  - Hierarchical directory file storage
  - File redirection
  - Better memory management
- Windowing systems
  - Windows 2.0, Windows 3.1, Windows 95
  - Windows NT, Windows XP, Windows Vista
  - Windows 7

Copyright 2010 John Wiley & Sons, Inc.  
and Robert F. Kelly

1-29

## Communications

- 1960s and 1970s: users communicated on multiterminal computer systems using talk and email facilities
- 1971: Ray Tomlinson creates the standard username@hostname email standard
- Modems permitted users to login to office systems, electronic bulletin board systems, CompuServe, AOL, and Prodigy **Importance of fiber optic communications**
- 1969: ARPANET begun **communications**
- 1985: First TCP-IP wide area network
- 1991: Tim Berners-Lee develops the concepts that become the World Wide Web
- 1993: Marc Andreessen develops Mosaic, the first graphical browser

Copyright 2010 John Wiley & Sons, Inc.  
and Robert F. Kelly
