

## Number Systems

### Reading:

Chapter 3 – Number Systems (except 3.7)

## Base of a Number System

- *Base*: the number of different digits including zero in the number system
  - Example: Base 10 has 10 digits, 0 through 9
- Decimal or base 10 number system
  - Origin: counting on the fingers
  - “Digit” from the Latin word *digitus* meaning “finger”
- *Binary* or *base 2*
  - *Bit* (binary digit): 2 digits, 0 and 1
- *Octal* or *base 8*: 8 digits, 0 through 7
- *Hexadecimal* or *base 16*:  
16 digits, 0-9, followed by A-F
- Examples:  $10_{10} = A_{16}$ ;  $11_{10} = B_{16}$

List consecutive numbers in base 2, base 10, and base 16

Sometimes a number is shown with the base of the system

3-2

## Base or Radix

- Base:
  - The number of different symbols required to represent any given number
- The *larger* the base, the *more* numerals are required
  - Base 10: 0,1, 2,3,4,5,6,7,8,9
  - Base 2: 0,1
  - Base 8: 0,1,2, 3,4,5,6,7
  - Base 16: 0,1,2,3,4,5,6,7,8,9,A,B,C,D,E,F

3-3

## Why Binary?

- Early computer design was decimal
  - Mark I and ENIAC
- John von Neumann proposed binary data processing (1945)
  - Simplified computer design
  - Used for both instructions and data
- Natural relationship between on/off switches and calculation using Boolean logic

On	Off
True	False
Yes	No
1	0

& Robert F. Kelly

3-4

## Keeping Track of the Bits

- Bits commonly stored and manipulated in groups
  - 8 bits = 1 *byte*
  - 4 bytes = 1 word (in many systems)
- Number of bits used in calculations
  - Affects accuracy of results
  - Limits size of numbers manipulated by the computer

Consider some primitive types used in Java: short, int, and long

& Robert F. Kelly

3-5

## Numbers: Physical Representation

- Different numerals, same number of oranges
  - Cave dweller: IIIII
  - Roman: V
  - Arabic: 5
- Different bases, same number of oranges
  - $5_{10}$
  - $101_2$
  - $12_3$

Copyright 2011 John Wiley & Sons, Inc.  
& Robert F. Kelly

3-6

## Number System

- Roman: position *independent*
- Modern: based on positional notation (place value)
  - Decimal system: system of **positional** notation based on powers of 10.
  - Binary system: system of **positional** notation based powers of 2
  - Octal system: system of **positional** notation based on powers of 8
  - Hexadecimal system: system of **positional** notation based powers of 16

& Robert F. Kelly

3-7

## Positional Notation: Base 10

$$527 = 5 \times 10^2 + 2 \times 10^1 + 7 \times 10^0$$

100's place      10's place      1's place

Place	$10^2$	$10^1$	$10^0$
Value	100	10	1
Evaluate	$5 \times 100$	$2 \times 10$	$7 \times 1$
Sum	500	20	7

Copyright 2011 John Wiley & Sons, Inc.  
& Robert F. Kelly

3-8

## Positional Notation: Octal

$$624_8 = 404_{10}$$

64's place    8's place                      1's place

Place	$8^2$	$8^1$	$8^0$
Value	64	8	1
Evaluate	6 x 64	2 x 8	4 x 1
Sum for Base 10	384	16	4

Copyright 2011 John Wiley & Sons, Inc.  
& Robert F. Kelly

3-9

## Positional Notation: Hexadecimal

$$6704_{16} = 26,372_{10}$$

4,096's place    256's place                      16's place    1's place

Place	$16^3$	$16^2$	$16^1$	$16^0$
Value	4,096	256	16	1
Evaluate	6 x 4,096	7 x 256	0 x 16	4 x 1
Sum for Base 10	24,576	1,792	0	4

In Web color notation,  
#0000FF is pure blue

& Robert F. Kelly

3-10

## L04 – Number Systems

## Positional Notation: Binary

$$1101\ 0110_2 = 214_{10}$$

Place	$2^7$	$2^6$	$2^5$	$2^4$	$2^3$	$2^2$	$2^1$	$2^0$
Value	128	64	32	16	8	4	2	1
Evaluate	1 x 128	1 x 64	0 x 32	1 x 16	0 x 8	1 x 4	1 x 2	0 x 1
Sum for Base 10	128	64	0	16	0	4	2	0

Copyright 2011 John Wiley & Sons, Inc.  
& Robert F. Kelly

3-11

## Range of Possible Numbers

- $R = B^K$  where
  - R = range
  - B = base
  - K = number of digits
- Example #1: Base 10, 2 digits
  - $R = 10^2 = 100$  different numbers (0...99)
- Example #2: Base 2, 16 digits
  - $R = 2^{16} = 65,536$  or 64K
  - 16-bit PC can store 65,536 different number values
    - How many colors can be represented in a 24-bit RGB color scheme? Each base color (r, g, and b) uses 8 bits.

& Robert F. Kelly

3-12

L04 – Number Systems

## Decimal Range for Bit Widths

Bits	Digits	Range
1	0+	2 (0 and 1)
4	1+	16 (0 to 15)
8	2+	256
10	3	1,024 (1K)
16	4+	65,536 (64K)
20	6	1,048,576 (1M)
32	9+	4,294,967,296 (4G)
64	19+	Approx. $1.6 \times 10^{19}$
128	38+	Approx. $2.6 \times 10^{38}$

Copyright 2011 John Wiley & Sons, Inc.  
& Robert F. Kelly

3-13

## Counting in Base 2

Binary Number	Equivalent				Decimal Number
	8's ( $2^3$ )	4's ( $2^2$ )	2's ( $2^1$ )	1's ( $2^0$ )	
0				$0 \times 2^0$	0
1				$1 \times 2^0$	1
10			$1 \times 2^1$	$0 \times 2^0$	2
11			$1 \times 2^1$	$1 \times 2^0$	3
100		$1 \times 2^2$			4
101		$1 \times 2^2$		$1 \times 2^0$	5
110		$1 \times 2^2$	$1 \times 2^1$		6
111		$1 \times 2^2$	$1 \times 2^1$	$1 \times 2^0$	7
1000	$1 \times 2^3$				8
1001	$1 \times 2^3$			$1 \times 2^0$	9
1010	$1 \times 2^3$		$1 \times 2^1$		10

3-14

## L04 – Number Systems

## Binary Arithmetic

$$\begin{array}{r}
 1\ 1\ 1\ 1\ 1 \\
 1\ 1\ 0\ 1\ 1\ 0\ 1 \\
 +\ 1\ 0\ 1\ 1\ 0\ 1\ 1 \\
 \hline
 1\ 0\ 0\ 0\ 0\ 0\ 1\ 1
 \end{array}$$

Copyright 2011 John Wiley & Sons, Inc.  
& Robert F. Kelly

3-15

## Boolean Logic

- System for logical operations
- Named after George Boole
- Components
  - Elements as members of a set
  - Operations (not, and, or, exclusive or)
  - Subsets and supersets
- Set membership and boolean operations are often implemented with binary numbers and operations

Copyright 2011 John Wiley & Sons, Inc.  
& Robert F. Kelly

3-16

## Binary Arithmetic: Boolean Logic

- Boolean logic without performing arithmetic
  - *EXCLUSIVE-OR*
    - Output is “1” only if either input, but *not* both inputs, is a “1”
  - *AND*
    - Output is “1” if and only both inputs are a “1”

$$\begin{array}{cccccccc}
 & 1 & 1 & 0 & 1 & 1 & 0 & 1 \\
 \text{and} & & & & 1 & 0 & 1 & 1 & 0 \\
 \hline
 & 0 & 0 & 0 & 0 & 1 & 0 & 0 & 0
 \end{array}$$

Sometimes referred to as a masking operation

Copyright 2011 John Wiley & Sons, Inc.  
& Robert F. Kelly

3-17

## Converting from Base 10

- Powers Table

Power Base	8	7	6	5	4	3	2	1	0
2	256	128	64	32	16	8	4	2	1
8				32,768	4,096	512	64	8	1
16					65,536	4,096	256	16	1

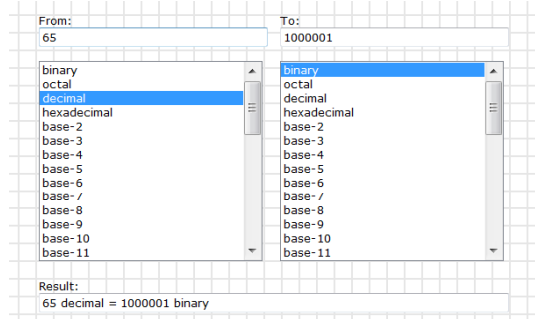

Copyright 2011 John Wiley & Sons, Inc.  
& Robert F. Kelly

3-18

## Conversion Calculator

- To quickly convert numbers, use [www.translatorscafe.com/cafe/units-converter/numbers/calculator/](http://www.translatorscafe.com/cafe/units-converter/numbers/calculator/)

Copyright 2011 John Wiley & Sons, Inc.  
& Robert F. Kelly

3-19

## From Base 16 to Base 2

- The **nibble** approach
  - Hex easier to read and write than binary

Base 16	1	F	6	7
Base 2	0001	1111	0110	0111

- Why hexadecimal?
  - Modern computer operating systems and networks present variety of troubleshooting data in hex format

Copyright 2011 John Wiley & Sons, Inc.  
& Robert F. Kelly
